RECOMMENDED BADGE GROUPS

Badge Setting Name	Role Number	Recommended for
Standard	1	RNs, Physicians
Therapy	2	All Therapists
EVS & Transport	3	EVS/Transport
Extended PT Care	4	ICU, L&D, Chaplaincy, Hospice, Sitters
Imaging, Lab, Dietary	5	Phlebotomists, Mobile Imaging, Meal Delivery
Stretchered Areas	6	Anyone primarily working around stretchers

BADGE SETTINGS & IMPACT

Badge Mode	Default Time	Workflow Impact
Bed Attach Time	3 sec	HCW used a monitored dispenser. HCW enters PT zone. Badge must be connected to the bed zone for 3 seconds in order to generate a compliant or non-compliant event.
State 0	15 sec	HCW used a monitored dispenser. Badge will go "dormant" and will not connect to a bed for this amount of time. This allows a HCW to use a monitored dispenser whose field may overlap with a bed zone.
State 1	N/A	HCW used a monitored dispenser and connects to a patient zone in less that time listed for State 4.
State 2	30 sec	HCW enters a second patient zone without performing HH. The State 2 timer begins and the badge light flashes yellow to let them know they've entered a second zone without washing/sanitizing. If the HCW stays in the second PT zone for longer than the State 2 timer, the badge will enter a non-compliant between multiple patient contact event . HCW is allowed to re-enter the first PT zone in less than the State 2 timer and still be compliant.
State 3	5 min	HCW enters a patient zone and helps the PT to their restroom. The State 3 timer begins and the HCW has this allotted time to re-enter that patient zone without performing HH. If the HCW returns to the same PT zone after this timer has expired, that will result in a non-compliant patient re-contact event .
State 4	10 min	After a HCW uses a monitored dispenser, they have this amount of time to enter a PT zone. After this time, if no PT contact has occurred, the badge will flash yellow to notify the HCW that the next action they take should be another dispense event. If the HCW does not dispense and comes into contact with a PT zone, the badge will result in a non-compliant before PT contact event .
State 5	6 min	This timer runs concurrently with the State 3 timer and begins as soon as the HCW leaves the PT zone. They then have this amount of time to wash out. If they do not wash out after leaving the PT zone for this amount of time, they will receive a non-compliant after PT contact event .
Sleep	50 min	Time it takes for the badge to go fully to sleep after an event. No events are generated at this time.

STANDARD BADGE SETTINGS (PHASE 2)

STATE	DEFINITION	LIGHTS	BEEPS	MINIMUM	MAXIMUM	DEFAULT
Bed Attach Ti	me			N/A	00:15	00:03
